(54) Title: VEHICLE ARRESTING DEVICE

WO 2004/072382 A1

(57) Abstract: A vehicle arresting device comprises a net (1) intended to be laid flat on the ground in the path A of an oncoming vehicle to be arrested. Two rows of barbed spikes (8) are attached to the net along its leading edge. When a vehicle runs over the device the spikes lodge in its front tyres and the net is caused to wrap around the front wheels, eventually being pulled tight under the vehicle so that the tension in the net prevents further rotation of the wheels and the vehicle is brought to a stop. The net is manufactured such that in its deployed condition it has sufficient lateral stretch to allow it to become fully wrapped around the front wheels before the tension builds up to a level at which there might otherwise be a risk of the spikes being pulled from the tyres.
